## September 1 4, 2022

The Honorable Xavier Becerra Secretary Department of Health and Human Services 200 Independence Avenue, SW Washington, DC 20201

The Honorable Chiquita Brooks -LaSure Administrator Centers for Medicare and Medicaid Services 7500 Security Boulevard Baltimore, MD 21244 children do not receive the recommended care. <sup>2</sup> TCD ultrasonography is a safe, non invasive, low -cost screening technique that measures blood velocities within the cerebral vessels. It has been shown to accurately identify children at higher risk for stroke, allowing preventive treat ment to be initiated .

Hydroxyurea and chronic blood transfusions are the only currently proven disease modifying treatments for children with SCD. Both therapies are used in primary and secondary stroke prevention. Although neither has been shown to prevent all S CD-related strokes, these treatment modalities can significantly reduce the risk of stroke and improve the quality of life for individuals with SC D. Further, hydroxyurea has been shown to significantly reduce the incidence of pain episodes and acute chest syndrome. Treatment with hydroxyurea is underutilized for many people with SCD who could benefit from it. <sup>3</sup>

The National Heart, Lung, and Blood Ins titute (NHLBI), the American Society of Hematology (ASH), and the American Stroke Association division of the American Heart Association (AHA) all recommend that all eligible children with SC D receive TCD screening annually from age 2 through 1 6 years. They also recommend that children who have abnormal TCD screening results who cannot receive regular blood transfusion therapy (due to availability, affordability, or family preference) should be offered hydroxyurea treatment at the maximum tolerat ed dose to substitute for regular blood transfusions. <sup>2,</sup>

Additional Recommendations re: Evaluating N eurological Complications in Sickle Cell Disease (SCD)

As highlighted in the cover letter, our groups encourage the De partment of Health and Human Services (HHS) to adopt the National Quality Forum (NQF) measure for Transcranial Doppler Ultrasonography Screening Among Children with Sickle Cell Anemia for
